Summary

Data Engineer with 2 years of experience building data pipelines on Databricks using **PySpark, SQL, and Azure/AWS**. Hands-on with ETL/ELT development, Delta Lake, and Medallion Architecture, with a focus on data quality checks and automating workflows. Comfortable working across data warehousing, big data processing, and cloud data engineering tools.

Experience

ITC Infotech

AUG 2024 – Present

Associate IT Consultant - Data Engineer

Bengaluru, India

- Designed and maintained scalable data pipelines using **Databricks, PySpark, and SQL** to process large volumes of structured and semi-structured data daily, ensuring efficient data flow and reliable ingestion.
- Reduced data quality issues by approximately **30%** through **validation checks, deduplication logic, null handling, and schema standardization**, improving consistency for downstream reporting.
- Automated end-to-end workflows using **Databricks Jobs and ADF**, reducing manual intervention by **40%** through improved scheduling, monitoring, and failure handling.
- Collaborated with **4 cross-functional teams - Requirement Collection, DevOps, Data Analysts, and Data Science** - to deliver structured, high-quality datasets, improving reporting efficiency and supporting data-driven decision-making across business use cases.

Projects

Customer EndToEnd DataPipeline | *PySpark, SQL, Python, Databricks, AWS S3*

[\[Source Code\]](#)

- Ingested raw JSON datasets from AWS S3 into Databricks, organizing data across bronze, silver, and gold layers using the medallion architecture. Built four modular Databricks notebooks to handle data ingestion, transformation, star schema modeling, and SCD Type 2 implementation.

API-Based Data Pipeline | *API, PySpark, SQL, Databricks, Python*

[\[Source Code\]](#)

- Built an API-driven data pipeline ingesting real-time data using Python requests and processing it using PySpark to enable near real-time analytics. Data is ingested from external APIs, processed through structured transformation layers, and delivered as analytics-ready datasets.

Sales Data Analysis | *SQL, Python, Excel, Snowflake, Power BI*

[\[Source Code\]](#)

- Developed a comprehensive sales analytics solution using Python, Excel, PostgreSQL, and Snowflake, performed data cleaning, transformation, and modeling, and enhanced interactive Power BI dashboards to uncover trends and support business decision-making.

E-Commerce | *Excel, PostgreSQL*

[\[Source Code\]](#)

- Designed relational schema and executed SQL-based analysis on e-commerce sales data.
- Generated insights on revenue trends, customer behavior, and product performance.

Technical Skills

Languages: SQL, Python, PySpark, Java

Cloud & Platforms: Databricks, Azure Data Factory, AWS S3, Azure Data Lake, Microsoft Entra ID

Database & Storage: MS SQL, PostgreSQL, Snowflake

Data Engineering & Big Data: Apache Spark, ETL/ELT, Data Ingestion, Data Warehousing, Data Lakes, REST API

Tools & Reporting: Git, GitHub, Linux, Visual Studio Code, Postman, Power BI, Excel

Education

JSS Academy of Technical Education

Bengaluru, India

Bachelor of Engineering; CGPA:8.59/10.0

Dec 2020 - May 2024

Certifications

Microsoft Azure: Microsoft Azure Services and Lifecycles (2024)

Databricks: Generative AI Fundamentals (2026)

Coursera: Git for Developers using GitHub (2024)

Databricks: Databricks Performance Optimization (2026)

Achievements

Won First Prize in Presentation at the **National Conference on Advanced Information Technology (NCAIT)** for the Topic “Enhancing Smart Farming with Blockchain Rest Scheduling and Data Fusion.”
